Sec 1

Directions for questions 1-3: The following passage consists of a set of three questions. Read the passage and answer the questions that follow.

Spectacles first appeared in our family when my father turned far-sighted around 40. I was next, turning myopic around 14. He began with those classic 'browline' frames and I began with a 'wire frame'. Frames, and frame styles, were changed several times before the myopia stabilised. I misplaced my glasses many times; on a couple of occasions I 'located' them after I had sat on them firmly. By age 30 or so I had settled for those black, rectangular 'shell' frames. Now they're due for replacement; they're past *rigor mortis*, I'm told.

'It's not the *frame* alone that's important,' chided my optician-friend, dissuading me from going online, 'but the *fit*, particularly at the 'bridge'. Frames rarely fit perfectly. So, any discomfort must be fixed by professional opticians by adjusting the frame at the temples (the sticks at the sides) or the temple tips (the ends of the sticks that go behind the ears). Adjustments like these cannot be done online, can they?' Mortified, I crooned my version of Johnny Nash's *I can see clearly now*.

Spectacles. Is there any other sartorial accoutrement that men use to gesture, or to make a statement, particularly while conversing? I think not. Not the pen, or tie, or watch, but spectacles. People in authority, as do public figures, often exploit them, even the plainest of frames, as seen during TV interviews. Superheroes too exploit them: Superman/Shaktimaan uses them to conceal their identity (and kind of emasculating themselves in the process). But 'Google Glasses' failed to make a statement, didn't it? When those gadgets — not glasses — return, perhaps with a vengeance, what will they be abused for then? Brrr. One shudders at that thought.

Glasses can be metonymic, pictorially speaking. Bapu comes to mind first. In our movies, bespectacled people are often derogatorily portrayed with 'soda glasses'. Some actors wear only frames! Spencer Tracey in *Guess Who's Coming to Dinner* is one example. Spectacle usage has its own etiquette. Students removing their glasses while conversing with school authorities could be mistaken for defiance. Fidgeting with one's glasses during an interview can send the wrong signals. And some believe that it's possible to tell a person by how they 'primp up' or 'push up' their spectacles: Do they clasp the frame with their thumb and forefinger and primp it, or do they push it up? Gesturing with glasses seems to come more naturally to men than women, don't you think?

Q.1

Why does the author pose the question in the last sentence of the passage?

- 1 ☐ To pose a rhetoric question to highlight the dominance of men in advertisements related to spectacles
- 2 ☐ To pose a rhetoric question to highlight the dominance of men in using spectacles
- 3 ☐ To pose a rhetoric question in order to find an answer to the dominance of men in wearing spectacles
- 4 ☐ To pose a rhetoric question to find a reason for the skewed gender ration in the spectacle user industry

Directions for questions 1-3: The following passage consists of a set of three questions. Read the passage and answer the questions that follow.

Spectacles first appeared in our family when my father turned far-sighted around 40. I was next, turning myopic around 14. He began with those classic 'browline' frames and I began with a 'wire frame'. Frames, and frame styles, were changed several times before the myopia stabilised. I misplaced my glasses many times; on a couple of occasions I 'located' them after I had sat on them firmly. By age 30 or so I had settled for those black, rectangular 'shell' frames. Now they're due for replacement; they're past *rigor mortis*, I'm told.

'It's not the *frame* alone that's important,' chided my optician-friend, dissuading me from going online, 'but the *fit*, particularly at the 'bridge'. Frames rarely fit perfectly. So, any discomfort must be fixed by professional opticians by adjusting the frame at the temples (the sticks at the sides) or the temple tips (the ends of the sticks that go behind the ears). Adjustments like these cannot be done online, can they?' Mortified, I crooned my version of Johnny Nash's *I can see clearly now*.

Spectacles. Is there any other sartorial accoutrement that men use to gesture, or to make a statement, particularly while conversing? I think not. Not the pen, or tie, or watch, but spectacles. People in authority, as do public figures, often exploit them, even the plainest of frames, as seen during TV interviews. Superheroes too exploit them: Superman/Shaktimaan uses them to conceal their identity (and kind of emasculating themselves in the process). But 'Google Glasses' failed to make a statement, didn't it? When those gadgets — not glasses — return, perhaps with a vengeance, what will they be abused for then? Brrr. One shudders at that thought.

Glasses can be metonymic, pictorially speaking. Bapu comes to mind first. In our movies, bespectacled people are often derogatorily portrayed with 'soda glasses'. Some actors wear only frames! Spencer Tracey in *Guess Who's Coming to Dinner* is one example. Spectacle usage has its own etiquette. Students removing their glasses while conversing with school authorities could be mistaken for defiance. Fidgeting with one's glasses during an interview can send the wrong signals. And some believe that it's possible to tell a person by how they 'primp up' or 'push up' their spectacles: Do they clasp the frame with their thumb and forefinger and primp it, or do they push it up? Gesturing with glasses seems to come more naturally to men than women, don't you think?

Q.2

Which of the following is most similar to the author's views on spectacles as described in the passage?

-
- 1 ☐ Spencer Tracy, a renowned film maker, comparing his stardom "an albatross around his neck".
-
- 2 ☐ Andre Agassi, a renowned Tennis champion, describing Lawn Tennis as something he loved with "a black hatred".
-
- 3 ☐ Michael Jordan, a renowned basketball player, comparing his success as "a bolt from the blue" as his skin colour should have had halted his success as an icon.
-
- 4 ☐ Elvis Presley, a renowned musician, describing his "misadventures as a budding singer" and the efficacy of his trade.
-

Directions for questions 1-3: The following passage consists of a set of three questions. Read the passage and answer the questions that follow.

Spectacles first appeared in our family when my father turned far-sighted around 40. I was next, turning myopic around 14. Q.4

The following question consists of a set of five sentences. These sentences need to be arranged in a coherent manner to create a meaningful paragraph. Type in the correct order of the sentences in the space provided below the question.

1. We know there are terrestrial planets around many stars, and we kind of expected the nearby stars would contain terrestrial planets.
2. This is not exciting because of this. The excitement is because it is the nearest one.
3. "I'm the nearest star, and I have a potentially habitable planet!" said R. Paul Butler, an astronomer at the Carnegie Institution for Science and a member of the team that made the discovery.
4. Beyond the planet's size and distance from its parent star, much about it is still mysterious.
5. One astronomer likened it to a flashing neon sign.

Q.5

In this question, five sentences are given. Of these, four sentences can be logically sequenced to make a coherent paragraph. One of the sentences doesn't fit. Type in the number of the sentence that doesn't fit into the paragraph in the space provided below the question.

1. Richard Luscombe, a Miami-based reporter who contributes regularly to the Guardian, had been filing for days on the preparations, the dire forecasts and the calls from officials to get out of harm's way.
2. The family survived a sleepless night and as Miami dodged the eye of the storm, he carried on reporting through the week.
3. Moving and equipping journalists on the ground is expensive and not done lightly, but after a number of days watching the skies, it became clear we should mobilise.
4. Sometimes major global events happen suddenly and without warning, testing the agility, authority and accuracy of a news operation.
5. Breaking off from reporting, he boarded up his home, and made plans for his family to shelter safely.

Directions for questions 6-11: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

From the era of the Renaissance one particular thinker is worthy of mention in the context of euthanasia, namely the humanist Thomas More. In his *Utopia*(1516), he proposed euthanasia as an option for hopelessly sick patients. His concept of euthanasia is different from that used in Antiquity (and later by Francis Bacon) where euthanasia means a peaceful nonviolent death. For Thomas More, euthanasia was a kind of last option for patients without any hope of cure. Euthanasia was for the Lord Chancellor, also known as Saint Thomas More, a compassionate answer to human suffering and tragedy. Besides medical hopelessness, there were two other conditions for euthanasia.

First, euthanasia has to be a “voluntarily death”, chosen by a person “with a torturing and lingering pain”; a request for euthanasia can only be accepted in medically desperate situations where nothing has been left undone that can contribute to health. No one can be forced to ask for euthanasia, similarly no one can be killed against his/her will. It is regarded as legitimate to “choose rather to die since they cannot live in much misery”. Persons in such misery are exhorted by priests and by magistrates, that, “since they are now unable to go on with the business of life, are become a burden to themselves and to all about them, and they have really out-lived themselves, they should no longer nourish such a rooted distemper”. They can be persuaded to end their life but “if they cannot be persuaded to it, this does not induce them to fail in their attendance and care of them.” The second condition concerns approval by public authorities, both civil and religious. Failing in this public approval means violation. Whereas a death chosen voluntarily and “upon such authority”, as mentioned above, is deemed very honourable.

More’s concept of euthanasia includes both (assisted) suicide and intentional killing. More believed that his concept of voluntary and involuntary death is legitimate: “They think they behave not only reasonably but in a manner consistent with religion and piety; because they follow the advice given them by their priests, who are the expounders of the will of God.” Fortunately enough for him the concept of euthanasia was a utopian concept appropriate for the best state in the new island Utopia.

Utopia literally means no-place, however More in the context of the English pronunciation of the word “utopia” is transforming “eutopia” into “utopia”, a place of felicity. This concept of euthanasia inspired praxis of euthanasia in England in the 16th century. It is difficult to extrapolate to what extent More would apply his euthanasia (with the semantics he used) – limited to fiction solely or into the real world of current biomedicine. One can guess that his esteem for autonomy, mercy and public approval would lead him to be supportive of active voluntary euthanasia.

One of the first modern thinkers who significantly influenced later conceptions of science and scientific knowledge and who came out with a new concept of euthanasia was the English late Renaissance philosopher Francis Bacon. His new understanding of science indirectly affected medicine as well: medicine should include both science and art, which enables a physician to help the patient to die in an easy and natural way. When describing this medical art, he uses the term “euthanasia exteriori” (a good death coming from outside). Simultaneously a good death should come from inside in a form of a sweet and calm dying while the soul of the patient is being prepared (caring for the dying). Apparently Bacon makes use of the term “euthanasia” in the context used by Suetonius when he reported the death of the emperor Augustus. By euthanasia Bacon means the quiet peaceful death of a person who is expecting it. The sense of euthanasia is for him to die non-violently and peacefully, falling asleep. Sleep is to him, similarly to the ancient understanding, a metaphor for death. To aid such a peaceful death is an important task of medicine. The physician’s role is to accompany the patient in dying a painless and equable death. Bacon harmonized the medical good death in its ancient meaning with the medieval concept of the *ars moriendi* and with care of the dying persons that we would refer to today as palliative care.

The development of views about euthanasia has been strongly influenced by social progress in opinions about suicide. Since the 16th century, within the mainstream opinion which held suicide as morally unacceptable, singular voices started to appear which held suicide as morally legitimate and justifiable in cases of serious illness.

Q.6

Why did Thomas More talk about the idea of euthanasia in his book 'Utopia'?

- 1 ☐ Because he wanted England to be happy place, devoid of any pain and suffering and hence be called 'utopia'.
- 2 ☐ Because he wanted the sick during his time in England to receive remarkable care and have the power to take decision about their own life.
- 3 ☐ Because he wanted people of England to put their hope in the afterlife and choose to let themselves die as life after death leads one to God's palace.
- 4 ☐ Because he wanted to introduce the idea that euthanasia is permissible by the state.

When describing this medical art, he uses the term "euthanasia exteriori" (a good death coming from outside). Simultaneously a good death should come from inside in a form of a sweet and calm dying while the soul of the patient is being prepared (caring for the dying). Apparently Bacon makes use of the term "euthanasia" in the context used by Suetonius when he reported the death of the emperor Augustus. By euthanasia Bacon means the quiet peaceful death of a person who is expecting it. The sense of euthanasia is for him to die non-violently and peacefully, falling asleep. Sleep is to him, similarly to the ancient understanding, a metaphor for death. To aid such a peaceful death is an important task of medicine. The physician's role is to accompany the patient in dying a painless and equable death. Bacon harmonized the medical good death in its ancient meaning with the medieval concept of the arsmoriendi and with care of the dying persons that we would refer to today as palliative care.

The development of views about euthanasia has been strongly influenced by social progress in opinions about suicide. Since the 16th century, within the mainstream opinion which held suicide as morally unacceptable, singular voices started to appear which held suicide as morally legitimate and justifiable in cases of serious illness.

Q.9

According to Bacon,

-
- 1 ☐ euthanasia cannot become a principle of universal legislation, being contrary to the natural law.
-
- 2 ☐ euthanasia is against God and against justice, as death of a person lies on the will of the God and euthanasia makes man usurp the role of God.
-
- 3 ☐ euthanasia is in harmony with the objective order, and does not create discrepancy to the natural law.
-
- 4 ☐ euthanasia should be a painless death that should come with the assistance of good medication.

In his *Utopia* (1516), he proposed euthanasia as an option for hopelessly sick patients. His concept of euthanasia is different from that used in Antiquity (and later by Francis Bacon) where euthanasia means a peaceful nonviolent death. For Thomas More, euthanasia was a kind of last option for patients without any hope of cure. Euthanasia was for the Lord Chancellor, also known as Saint Thomas More, a compassionate answer to human suffering and tragedy. Besides medical hopelessness, there were two other conditions for euthanasia.

First, euthanasia has to be a “voluntarily death”, chosen by a person “with a torturing and lingering pain”; a request for euthanasia can only be accepted in medically desperate situations where nothing has been left undone that can contribute to health. No one can be forced to ask for euthanasia, similarly no one can be killed against his/her will. It is regarded as legitimate to “choose rather to die since they cannot live in much misery”. Persons in such misery are exhorted by priests and by magistrates, that, “since they are now unable to go on with the business of life, are become a burden to themselves and to all about them, and they have really out-lived themselves, they should no longer nourish such a rooted distemper”. They can be persuaded to end their life but “if they cannot be persuaded to it, this does not induce them to fail in their attendance and care of them.” The second condition concerns approval by public authorities, both civil and religious. Failing in this public approval means violation. Whereas a death chosen voluntarily and “upon such authority”, as mentioned above, is deemed very honourable.

More’s concept of euthanasia includes both (assisted) suicide and intentional killing. More believed that his concept of voluntary and involuntary death is legitimate: “They think they behave not only reasonably but in a manner consistent with religion and piety; because they follow the advice given them by their priests, who are the expounders of the will of God.” Fortunately enough for him the concept of euthanasia was a utopian concept appropriate for the best state in the new island Utopia.

Utopia literally means no-place, however More in the context of the English pronunciation of the word “utopia” is transforming “eutopia” into “utopia”, a place of felicity. This concept of euthanasia inspired praxis of euthanasia in England in the 16th century. It is difficult to extrapolate to what extent More would apply his euthanasia (with the semantics he used) – limited to fiction solely or into the real world of current biomedicine. One can guess that his esteem for autonomy, mercy and public approval would lead him to be supportive of active voluntary euthanasia.

One of the first modern thinkers who significantly influenced later conceptions of science and scientific knowledge and who came out with a new concept of euthanasia was the English late Renaissance philosopher Francis Bacon. His new understanding of science indirectly affected medicine as well: medicine should include both science and art, which enables a physician to help the patient to die in an easy and natural way. When describing this medical art, he uses the term “euthanasia exteriori” (a good death coming from outside). Simultaneously a good death should come from inside in a form of a sweet and calm dying while the soul of the patient is being prepared (caring for the dying). Apparently Bacon makes use of the term “euthanasia” in the context used by Suetonius when he reported the death of the emperor Augustus. By euthanasia Bacon means the quiet peaceful death of a person who is expecting it. The sense of euthanasia is for him to die non-violently and peacefully, falling asleep. Sleep is to him, similarly to the ancient understanding, a metaphor for death. To aid such a peaceful death is an important task of medicine. The physician’s role is to accompany the patient in dying a painless and equable death. Bacon harmonized the medical good death in its ancient meaning with the medieval concept of the *ars moriendi* and with care of the dying persons that we would refer to today as palliative care.

The development of views about euthanasia has been strongly influenced by social progress in opinions about suicide. Since the 16th century, within the mainstream opinion which held suicide as morally unacceptable, singular voices started to appear which held suicide as morally legitimate and justifiable in cases of serious illness.

Q.10

Which of the following is true about More's idea of euthanasia?

- 1 ☐ Euthanasia does not include the act of suicide.
- 2 ☐ Euthanasia is a painless death and hence best suited for people who have suffered immense pain.
- 3 ☐ Euthanasia is the final remedy for extremely unwell people.
- 4 ☐ Euthanasia is the only option for those whose illness cannot be cured.

Directions for questions 6-11: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

From the era of the Renaissance one particular thinker is worthy of mention in the context of euthanasia, namely the humanist Thomas More. In his *Utopia*(1516), he proposed euthanasia as an option for hopelessly sick patients. His concept of euthanasia is different from that used in Antiquity (and later by Francis Bacon) where euthanasia means a peaceful nonviolent death. For Thomas More, euthanasia was a kind of last option for patients without any hope of cure. Euthanasia was for the Lord Chancellor, also known as Saint Thomas More, a compassionate answer to human suffering and tragedy. Besides medical hopelessness, there were two other conditions for euthanasia.

First, euthanasia has to be a “voluntarily death”, chosen by a person “with a torturing and lingering pain”; a request for euthanasia can only be accepted in medically desperate situations where nothing has been left undone that can contribute to health. No one can be forced to ask for euthanasia, similarly no one can be killed against his/her will. It is regarded as legitimate to “choose rather to die since they cannot live in much misery”. Persons in such misery are exhorted by priests and by magistrates, that, “since they are now unable to go on with the business of life, are become a burden to themselves and to all about them, and they have really out-lived themselves, they should no longer nourish such a rooted distemper”. They can be persuaded to end their life but “if they cannot be persuaded to it, this does not induce them to fail in their attendance and care of them.” The second condition concerns approval by public authorities, both civil and religious. Failing in this public approval means violation. Whereas a death chosen voluntarily and “upon such authority”, as mentioned above, is deemed very honourable.

More's concept of euthanasia includes both (assisted) suicide and intentional killing. More believed that his concept of voluntary and involuntary death is legitimate: “They think they behave not only reasonably but in a manner consistent with religion and piety; because they follow the advice given them by their priests, who are the expounders of the will of God.” Fortunately enough for him the concept of euthanasia was a utopian concept appropriate for the best state in the new island Utopia.

Utopia literally means no-place, however More in the context of the English pronunciation of the word “utopia” is transforming “eutopia” into “utopia”, a place of felicity. This concept of euthanasia inspired praxis of euthanasia in England in the 16th century. It is difficult to extrapolate to what extent More would apply his euthanasia (with the semantics he used) – limited to fiction solely or into the real world of current biomedicine. One can guess that his esteem for autonomy, mercy and public approval would lead him to be supportive of active voluntary euthanasia.

One of the first modern thinkers who significantly influenced later conceptions of science and scientific knowledge and who came out with a new concept of euthanasia was the English late Renaissance philosopher Francis Bacon. His new understanding of science indirectly affected medicine as well: medicine should include both science and art, which enables a physician to help the patient to die in an easy and natural way. When describing this medical art, he uses the term “euthanasia exteriori” (a good death coming from outside). Simultaneously a good death should come from inside in a form of a sweet and calm dying while the soul of the patient is being prepared (caring for the dying). Apparently Bacon makes use of the term “euthanasia” in the context used by Suetonius when he reported the death of the emperor Augustus. By euthanasia Bacon means the quiet peaceful death of a person who is expecting it. The sense of euthanasia is for him to die non-violently and peacefully, falling asleep. Sleep is to him, similarly to the ancient understanding, a metaphor for death. To aid such a peaceful death is an important task of medicine. The physician's role is to accompany the patient in dying a painless and equable death. Bacon harmonized the medical good death in its ancient meaning with the medieval concept of the arsmoriendi and with care of the dying persons that we would refer to today as palliative care.

The development of views about euthanasia has been strongly influenced by social progress in opinions about suicide. Since the 16th century, within the mainstream opinion which held suicide as morally unacceptable, singular voices started to appear which held suicide as morally legitimate and justifiable in cases of serious illness.

Q.11

According to your understanding of the above passage, why is approval from public authorities necessary for euthanasia?

- 1 ☐ Because without the approbation of the priests and the senate, his family which facilitated the process will be excommunicated.
- 2 ☐ Because without the approbation of the priests and the senate, his death will be considered a crime and his family will be marred by social ostracizing.
- 3 ☐ Because without the approbation of the priests and the senate, he will not get any of the honours of a proper funeral.
- 4 ☐ Because without consent from the priests and the senate, his death will be seen as a challenge to God's autonomy.

Q.12

The following question consists of a paragraph followed by four summaries. Choose the option that best captures the essence of the paragraph. Type in the option number in the space provided below the question.

Babies whose needs are met quickly and warmly (e.g., feeding, changing, holding/cradling, and soothing them) achieve a crucial developmental task – *attachment*. This bond of affection between parents and children is necessary for a healthy parent-child relationship, and also extends to relationships between children, their siblings, and other family members (e.g., grandparents, aunts/uncles, etc) and caregivers. When infants attach successfully to their parents and caregivers, they learn to trust that the outside world is a welcoming place and are more likely to explore and interact with their environment.

Which of the following best summarizes the paragraph?

1. Attachment between parents and the child is highly important because it leads to better social skills and fewer behavioural problems.
2. Attachment between parents and the child is highly important because it lays the groundwork for emotional and cognitive development.
3. Attachment between parents and the child is highly important because it initiates social development.
4. Attachment between parents and the child is highly important because it helps the parents to exhibit greater control of their children's behaviour.

🔍 Answer key/Solution

Directions for questions 13 to 15: The passage given below is followed by a set of three questions. Choose the most appropriate answer to each question.

In a new piece on Wired.com, *“Could This Be the Year Movies Stopped Mattering?”* Brian Raftery suggests that movies have “devolved from Culture-Conquering Pastime to merely Something to Do When the Wi-Fi’s Down,” and that their former centrality to the culture has been taken over by a diverse range of media events—serial television above all, but also Pokémon Go, “Hamilton,” YouTube memes, and visual albums such as Beyoncé’s “Lemonade.” The simplest refutation is that what matters is determined not by media discussion but by each person for herself; movies matter to me, therefore they matter.

But Raftery is on to something important, even if, as I think, he comes at it backward. He’s right that the kinds of work that capture widespread attention and find widespread favor have changed in recent years—and he’s right that these changes are inseparable from the realm of criticism, the very nature of which has changed drastically in the same period. Raftery’s fixation on “the pop-cultural conversation” and the “zeitgeist” is one that’s shared by the era, by the critical community at large, and this fixation yields its own predestined results. Modern cultural criticism gives rise to its own cultural artifacts, and the two fit together like a lock and key. As a work of criticism, Raftery’s essay is exemplary of the very phenomenon that he’s documenting—and that circularity, that self-fulfilling critical criterion, is the defining trait of the time.

The rise of so-called quality television has coincided with the advent of widespread access to the Internet, which is closely correlated with consumers’ level of education. The serial nature of serial television lent itself to online discussion—blogs, comments, e-mails, and then, a few years later, social-media postings—in a way that the one-time-only and freestanding experience of going to a movie doesn’t; at the same time that it also locked specifically into the new habits of the educated in a way that moviegoing didn’t.

The principal quality of quality TV has proven to be its ability to generate discourse—not just on the part of critics and viewers but on the part of journalists. As particular series, and television over all, became the subjects of widespread public discussion—discussion in the literal sense, of writers and viewers responding to each other—that discussion became news. Suddenly, television was propelled from the arts page to the front page, and that trend was accelerated by the nature of the shows. Their emphasis on stories and characters involving iconic phenomena in cultural history and hot-button issues of contemporary sociology and politics grabbed—and still grabs—hold of journalists’ nose for stories. Many series seem to exist only to present topics in ready-to-debate form; they are built to give rise to “think pieces,” which have become the dominant, if easily parodied, critical mode.

The experience that the watching and the critique of new serial television resemble above all is the college experience. Binge-watching is cramming, and the discussions that are sparked reproduce academic habits: What It Says About, What It Gets Right About, What It Gets Wrong About. There is a lot of aboutness but very little being; lots of puzzle-like assembling of information to pose particular kinds of questions (posing questions—sounds like a final exam), to explore particular issues (sounds like a term paper). For these reasons, television’s actual competition isn’t movies or museums or novels but nonfiction books, documentary films, journalism, radio discussions, and general online clicking. Serial television is designed to gratify the craving for facts to piece together and analyze. The medium seems created for the media buzz that’s generated by the media people who are its natural audience, and to whom the shows owe their acclaim, their prestige, and their success.

Q.13

With which of the following would the author agree?

1 ☐ The quality of criticism which, say, a documentary would spin, is more engaging and incisive than the latest spy movie.

2 ☐ College-going students are the primary niche audience for TV shows because the movie-going audience has far less time at its disposal for binge-watching.

3 ☐ What is popular does determine, to a large extent, what matters the most as a cultural artifact to be seen and critiqued.

4 ☐ Quality TV shows come to the attention of not just viewers and critics, but also of journalists because they often depict debatable socio-political issues.

Directions for questions 13 to 15: The passage given below is followed by a set of three questions. Choose the most appropriate answer to each question.

In a new piece on Wired.com, *“Could This Be the Year Movies Stopped Mattering?”* Brian Raftery suggests that movies have “devolved from Culture-Conquering Pastime to merely Something to Do When the Wi-Fi’s Down,” and that their former centrality to the culture has been taken over by a diverse range of media events—serial television above all, but also Pokémon Go, “Hamilton,” YouTube memes, and visual albums such as Beyoncé’s “Lemonade.” The simplest refutation is that what matters is determined not by media discussion but by each person for herself; movies matter to me, therefore they matter.

But Raftery is on to something important, even if, as I think, he comes at it backward. He’s right that the kinds of work that capture widespread attention and find widespread favor have changed in recent years—and he’s right that these changes are inseparable from the realm of criticism, the very nature of which has changed drastically in the same period. Raftery’s fixation on “the pop-cultural conversation” and the “zeitgeist” is one that’s shared by the era, by the critical community at large, and this fixation yields its own predestined results. Modern cultural criticism gives rise to its own cultural artifacts, and the two fit together like a lock and key. As a work of criticism, Raftery’s essay is exemplary of the very phenomenon that he’s documenting—and that circularity, that self-fulfilling critical criterion, is the defining trait of the time.

The rise of so-called quality television has coincided with the advent of widespread access to the Internet, which is closely correlated with consumers’ level of education. The serial nature of serial television lent itself to online discussion—blogs, comments, e-mails, and then, a few years later, social-media postings—in a way that the one-time-only and freestanding experience of going to a movie doesn’t; at the same time that it also locked specifically into the new habits of the educated in a way that moviegoing didn’t.

The principal quality of quality TV has proven to be its ability to generate discourse—not just on the part of critics and viewers but on the part of journalists. As particular series, and television over all, became the subjects of widespread public discussion—discussion in the literal sense, of writers and viewers responding to each other—that discussion became news. Suddenly, television was propelled from the arts page to the front page, and that trend was accelerated by the nature of the shows. Their emphasis on stories and characters involving iconic phenomena in cultural history and hot-button issues of contemporary sociology and politics grabbed—and still grabs—hold of journalists’ nose for stories. Many series seem to exist only to present topics in ready-to-debate form; they are built to give rise to “think pieces,” which have become the dominant, if easily parodied, critical mode.

The experience that the watching and the critique of new serial television resemble above all is the college experience. Binge-watching is cramming, and the discussions that are sparked reproduce academic habits: What It Says About, What It Gets Right About, What It Gets Wrong About. There is a lot of aboutness but very little being; lots of puzzle-like assembling of information to pose particular kinds of questions (posing questions—sounds like a final exam), to explore particular issues (sounds like a term paper). For these reasons, television’s actual competition isn’t movies or museums or novels but nonfiction books, documentary films, journalism, radio discussions, and general online clicking. Serial television is designed to gratify the craving for facts to piece together and analyze. The medium seems created for the media buzz that’s generated by the media people who are its natural audience, and to whom the shows owe their acclaim, their prestige, and their success.

Q.14

Which of the following is true as per a strict reading of the passage?

1 ☐ The level of the viewers' education has an inverse relationship to the spectrum that popular culture forms, with movies at the beginning and quality TV at the end of said spectrum.

2 ☐ The academic habits that serial TV watching closely parallels makes it unsuitable for the average viewer, and is reflective of the cultural elitism which believes that movies aren't as central as they used to be.

3 ☐ Contemporary cultural artifacts and cultural criticism have both changed recently and feed into one another.

4 ☐ 'Think pieces' are the hardly dominant mode for cultural conversation even though much of quality TV is engineered to spawn those.

Directions for questions 16-21: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

Jonathan Haidt's recent book on morality aims to explain "why good people are divided by politics and religion". In *The Righteous Mind* he says, yes, moral decisions are influenced by our intentional decision-making processes – the rational weighing up of alternatives, the assessment of right and wrong – but that this decision-making is really driven by underlying intuitions. This intuitive thinking does not involve rational thought but follows the logics of – and what would be advantages for – the social group or groups we happen to be a member of. In fact, we are less rational creatures than we are rationalising creatures, and the groups we participate in matter hugely and demand our attention.

Haidt uses religion as the exemplary social grouping, emphasising that it is cultural and social much more than it is belief-based – a "team sport". In so doing, however, he repeats one of the most deep-seated assumptions about religion (and non-religion) in contemporary thought: one that is, somewhat ironically, rationalist in nature. This is the view that, while religion is a "team sport", those that don't have it are defined by the absence of this kind of cultural and social commitment rather than the presence of an alternative one. We typically think of religion as cultural – a rich network of beliefs, symbols, practices and social relations – and non-religion as a purely intellectual critique of (some aspects of) these cultures.

Contrary to this, new anthropological work is beginning to show that being non-religious also involves a range of cultural and social manifestations. These manifestations are not organised into clear institutions – there is no Church of Atheism – and this means that they can't be so easily pointed to as we can to a Methodist chapel or Hasidic Jewish traditional dress. But they are there.

People who choose "secular" funerals do not pick images and ideas at random: they turn to an established lexicon of naturalist and other imagery and to certain secular as well as religious music. Those of the "New Atheist" persuasion celebrate and revere science in a way that helps them find meaning in their lives. And non-religious people often have an aversion to different kinds of religiosity and non-religiosity that come out in their choice of friends and, especially, romantic partners.

Richard Dawkins and other New Atheists are often criticised for failing to understand that being religious is not about beliefs – but about cultural practice and social participation. Yet criticising New Atheists for their "false beliefs" makes precisely the same mistake and reduces this culture to its propositional statements and knowledge claims. In fact, people are brought together and tied together by their different kinds of non-religious positions, and to criticise one of these cultures, the New Atheism, on the grounds that it does not appreciate that religion is a team sport is to miss the point that atheism, too, is a team sport.

Obsessing about how coherent the arguments of New Atheists are – rather than noticing how popular the movement is; the emotional feelings of recognition that some readers have in response to it; how people discuss New Atheism with each other and use it to help articulate shared non-religious positions – is to do precisely what critics would have the New Atheists stop doing. You don't have to share the New Atheists' beliefs to treat their culture with some respect – and are interested not in whether its claims are correct but in why people are drawn to it and what is underlying the anti-theist prejudices that are sometimes expressed in these claims. The notion that cultural and social investments are more important than beliefs is fine, but it has to cut both ways.

Q.16

According to the passage, what is the aim of the author Jonathan Haidt?

1 ☐ To understand the difference between religion and rationalism

2 ☐ To express his views on the juxtaposition of rituals and rationalism

3 ☐ To understand the reason behind people combining religious beliefs with rational analysis

4 ☐ To explain how our rational decisions are driven by intuitional decisions

Directions for questions 16-21: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

Jonathan Haidt's recent book on morality aims to explain "why good people are divided by politics and religion". In *The Righteous Mind* he says, yes, moral decisions are influenced by our intentional decision-making processes – the rational weighing up of alternatives, the assessment of right and wrong – but that this decision-making is really driven by underlying intuitions. This intuitive thinking does not involve rational thought but follows the logics of – and what would be advantages for – the social group or groups we happen to be a member of. In fact, we are less rational creatures than we are rationalising creatures, and the groups we participate in matter hugely and demand our attention.

Haidt uses religion as the exemplary social grouping, emphasising that it is cultural and social much more than it is belief-based – a "team sport". In so doing, however, he repeats one of the most deep-seated assumptions about religion (and non-religion) in contemporary thought: one that is, somewhat ironically, rationalist in nature. This is the view that, while religion is a "team sport", those that don't have it are defined by the absence of this kind of cultural and social commitment rather than the presence of an alternative one. We typically think of religion as cultural – a rich network of beliefs, symbols, practices and social relations – and non-religion as a purely intellectual critique of (some aspects of) these cultures.

Contrary to this, new anthropological work is beginning to show that being non-religious also involves a range of cultural and social manifestations. These manifestations are not organised into clear institutions – there is no Church of Atheism – and this means that they can't be so easily pointed to as we can to a Methodist chapel or Hasidic Jewish traditional dress. But they are there.

People who choose "secular" funerals do not pick images and ideas at random: they turn to an established lexicon of naturalist and other imagery and to certain secular as well as religious music. Those of the "New Atheist" persuasion celebrate and revere science in a way that helps them find meaning in their lives. And non-religious people often have an aversion to different kinds of religiosity and non-religiosity that come out in their choice of friends and, especially, romantic partners.

Richard Dawkins and other New Atheists are often criticised for failing to understand that being religious is not about beliefs – but about cultural practice and social participation. Yet criticising New Atheists for their "false beliefs" makes precisely the same mistake and reduces this culture to its propositional statements and knowledge claims. In fact, people are brought together and tied together by their different kinds of non-religious positions, and to criticise one of these cultures, the New Atheism, on the grounds that it does not appreciate that religion is a team sport is to miss the point that atheism, too, is a team sport.

Obsessing about how coherent the arguments of New Atheists are – rather than noticing how popular the movement is; the emotional feelings of recognition that some readers have in response to it; how people discuss New Atheism with each other and use it to help articulate shared non-religious positions – is to do precisely what critics would have the New Atheists stop doing. You don't have to share the New Atheists' beliefs to treat their culture with some respect – and are interested not in whether its claims are correct but in why people are drawn to it and what is underlying the anti-theist prejudices that are sometimes expressed in these claims. The notion that cultural and social investments are more important than beliefs is fine, but it has to cut both ways.

Q.18

What is the assumption we make concerning religion according to Haidt?

1 ☐ We often assume that religion is actually culturally and socially acceptable because of its beliefs; atheist or non-religious people critic that.

2 ☐ We assume that religion is a team sport where beliefs are projected through priestly practices.

3 ☐ We assume that religion is a team sport and people expand their beliefs through cultural and social practices whereas atheists oppose these only by criticising.

4 ☐ We assume that religious people are not atheists. They are in the due course of time possess an orthodox and a rigid mentality.

 Answer key/Solution

Directions for questions 16-21: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

Jonathan Haidt's recent book on morality aims to explain "why good people are divided by politics and religion". In *The Righteous Mind* he says, yes, moral decisions are influenced by our intentional decision-making processes – the rational weighing up of alternatives, the assessment of right and wrong – but that this decision-making is really driven by underlying intuitions. This intuitive thinking does not involve rational thought but follows the logics of – and what would be advantages for – the social group or groups we happen to be a member of. In fact, we are less rational creatures than we are rationalising creatures, and the groups we participate in matter hugely and demand our attention.

Haidt uses religion as the exemplary social grouping, emphasising that it is cultural and social much more than it is belief-based – a "team sport". In so doing, however, he repeats one of the most deep-seated assumptions about religion (and non-religion) in contemporary thought: one that is, somewhat ironically, rationalist in nature. This is the view that, while religion is a "team sport", those that don't have it are defined by the absence of this kind of cultural and social commitment rather than the presence of an alternative one. We typically think of religion as cultural – a rich network of beliefs, symbols, practices and social relations – and non-religion as a purely intellectual critique of (some aspects of) these cultures.

Contrary to this, new anthropological work is beginning to show that being non-religious also involves a range of cultural and social manifestations. These manifestations are not organised into clear institutions – there is no Church of Atheism – and this means that they can't be so easily pointed to as we can to a Methodist chapel or Hasidic Jewish traditional dress. But they are there.

People who choose "secular" funerals do not pick images and ideas at random: they turn to an established lexicon of naturalist and other imagery and to certain secular as well as religious music. Those of the "New Atheist" persuasion celebrate and revere science in a way that helps them find meaning in their lives. And non-religious people often have an aversion to different kinds of religiosity and non-religiosity that come out in their choice of friends and, especially, romantic partners.

Richard Dawkins and other New Atheists are often criticised for failing to understand that being religious is not about beliefs – but about cultural practice and social participation. Yet criticising New Atheists for their "false beliefs" makes precisely the same mistake and reduces this culture to its propositional statements and knowledge claims. In fact, people are brought together and tied together by their different kinds of non-religious positions, and to criticise one of these cultures, the New Atheism, on the grounds that it does not appreciate that religion is a team sport is to miss the point that atheism, too, is a team sport.

Obsessing about how coherent the arguments of New Atheists are – rather than noticing how popular the movement is; the emotional feelings of recognition that some readers have in response to it; how people discuss New Atheism with each other and use it to help articulate shared non-religious positions – is to do precisely what critics would have the New Atheists stop doing. You don't have to share the New Atheists' beliefs to treat their culture with some respect – and are interested not in whether its claims are correct but in why people are drawn to it and what is underlying the anti-theist prejudices that are sometimes expressed in these claims. The notion that cultural and social investments are more important than beliefs is fine, but it has to cut both ways.

Q.19

What according to the passage is a 'false belief' as far as new atheism is concerned?

-
- 1 ☐ “False belief” is associated with new atheists understanding of religion as they consider it based only on particular beliefs and not on cultural or social practices.
-
- 2 ☐ The atheists’ understanding is based on rationality and scientific judgement which is now termed ‘false belief’.
-
- 3 ☐ Calling the atheists’ judgement of religious community a “false belief” was prevalent among the religious groups.
-
- 4 ☐ “False belief” is associated with disregarding and disrespecting religious sentiments of people.

The notion that cultural and social investments are more important than beliefs is fine, but it has to cut both ways.

Q.20

What can be inferred from the last paragraph of the given passage?

-
- 1 ☐ The atheists believe that cultural association with sociology is important for a religion to thrive and make it rationally sustainable.
-
- 2 ☐ Before concluding anything about new atheists, one must understand why people are getting drawn to it and understand the prejudices involved.
-
- 3 ☐ Social beliefs and cultural society often clash together; therefore one must be observant and not judgemental.
-
- 4 ☐ To remove prejudices in both rational and spiritual world one must understand each other's importance and values.

Q.22

The following question consists of a set of five sentences. These sentences need to be arranged in a coherent manner to create a meaningful paragraph. Type in the correct order of the sentences in the space provided below the question.

1. This might be felt as a lack of energy, reduced enjoyment in activities and a need for more sleep than normal.

2. In addition to depressive episodes, "sad" is characterised by various symptoms including chronic oversleeping and extreme carbohydrate cravings that lead to weight gain.

3. But for around 6% of the UK population and between 2-8% of people in other higher latitude countries such as Canada, Denmark and Sweden, these symptoms are so severe that these people are unable to work or function normally.

4. They suffer from a particular form of major depression, triggered by changes in the seasons, called seasonal affective disorder or Sad.

5. For many of us in the UK, the annual ritual of putting the clocks back for daylight saving time can be accompanied by a distinct feeling of winter blues as autumn well and truly beds in.

Q.24

The following question consists of a paragraph followed by four summaries. Choose the option that best captures the essence of the paragraph. Type in the option number in the space provided below the question.

Many of Ray's early films end hopefully, even in their ambivalence. Charulata, for instance, doesn't conclude so much as come to a standstill with a series of photographs: Charu's half-lit face; her husband's half-lit face; their hands not quite touching, but reaching out hesitantly. But given the loss of trust in their relationship, would the hands have been extended at all? Ray seems naïve in this light, despite his superior sensibility

1. Because of the sense of ambivalence he used to end his films, Ray wanted to express the same thing in his later films but failed.
2. Despite being sensible, Ray's early films projected a sense of childish hopefulness in spite of the apparent ambivalence.
3. Despite the ambivalence, Ray's films projected a childlike maturity which often ended hopefully, thus making the films cater to every kind of audience.
4. Charulata, being one of Ray's earlier works, lacks maturity but promotes hope and epitomizes Ray's fascination for childlike narration.

🔑 Answer key/Solution

Directions for questions 25-30: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

In 1988, renowned linguist and political scholar Noam Chomsky co-authored a book with Edward S. Herman in which he posited that the Western corporate media "manufactured consent" in the interests of dominant and elite groups in society. Chomsky, who is admired for his intellect by some and accused of anti-US leanings by others, argued that propaganda is pervasive in the so-called free media of the West.

A lot has changed in the twenty seven years since Manufacturing Consent was published. Namely, the media ownership models that Chomsky criticized have changed, and that landscape has transformed, largely due to the advent of social media and other online platforms.

Still, Chomsky believes little has changed in his Manufacturing Consent model. In an interview with Byline, Chomsky discussed media landscape, saying that despite the influx of new sources and new platforms, his "basic analysis is still the same."

Though the influence and reach of traditional media conglomerates has waned in the wake of alternative platforms, like Facebook and Twitter, Chomsky maintains that the public's access to information is limited through the same framework.

"I don't look at Twitter because it doesn't tell me anything," He said, "It tells me people's opinions about lots of things, but very briefly and necessarily superficially, and it doesn't have the core news."

"There are journalists there on the scene where major events are taking place and, now there are fewer of them than before, so that's a narrowing of the sources of news," he argued, "What you see is local news, pieces from the wire services, some pieces for The New York Times, and very little else."

Another issue that continues to dominate the media-sphere, according to Chomsky, is the reliance on advertising. In Manufacturing Consent, he wrote that media organizations, for all intents and purposes, are businesses, and as such, are driven by consumer demand. In the case of the news media, the consumers are advertisers. This means that, we, as news media viewers, are the product that is being sold to advertisers. This model, according to Chomsky, is still very alive and well today.

"The product that is being presented to the market is readers (or viewers)," He explained, "So these are basically major corporations providing audiences to other businesses, and that significantly shapes the nature of the institution."

What is happening today, with organizations like BuzzFeed using "native advertising" – advertising that matches the content of a news article or story – "is an intensification of something which shouldn't exist."

During the interview, Chomsky also touched upon the NSA scandal that was covered by The Guardian and The Washington Post after Edward Snowden leaked documents capturing the agency's invasive surveillance program.

Asked if he thinks the coverage of the NSA scandal defeats his model, since it works against "elite groups", Chomsky said no. "The business model is quite willing to tolerate the exposure of governments intervening in personal life...as they don't want a powerful and intrusive state." He explained.

He additionally stressed that today's business do more in the way of violating privacy than the government agencies like the NSA, specifically because of the reliance on advertising.

"With Google, and others of course, there is an immense amount of surveillance to try to obtain personal

data about individuals and their habits and interactions and so on, to shape the way information is presented to them. They do more surveillance than the NSA."

Q.25

Chomsky's critique of media practices puts the onus on:

- 1 ☐ theskewed retelling of events in favour of sensationalism.
- 2 ☐ theskewed retelling of events in favour of white male Caucasian privileges.
- 3 ☐ theskewed retelling of events in favour of nonpareil citizens.
- 4 ☐ The skewed retelling of events in favour of upper middle class ethos.

"With Google, and others of course, there is an immense amount of surveillance to try to obtain personal data about individuals and their habits and interactions and so on, to shape the way information is presented to them. They do more surveillance than the NSA."

Q.26

As per the passage, which of the following is true regarding Chomsky's critique and its relevance today?

- 1 ☐ Chomsky's theory relied on print media, but with the onset of digital media the former does not hold any appeal.
- 2 ☐ Chomsky was critiquing the media during the Cold War years and hence he is no longer relevant.
- 3 ☐ Chomsky's critique is still relevant since the platform of media has remained unchanged.
- 4 ☐ Chomsky's critique is centred on certain practices and, hence, although the landscape has changed a lot, the practices remain the same and justify his theory.

Another issue that continues to dominate the media-sphere, according to Chomsky, is the reliance on advertising. In Manufacturing Consent, he wrote that media organizations, for all intents and purposes, are businesses, and as such, are driven by consumer demand. In the case of the news media, the consumers are advertisers. This means that, we, as news media viewers, are the product that is being sold to advertisers. This model, according to Chomsky, is still very alive and well today.

"The product that is being presented to the market is readers (or viewers)," He explained, "So these are basically major corporations providing audiences to other businesses, and that significantly shapes the nature of the institution."

What is happening today, with organizations like BuzzFeed using "native advertising" – advertising that matches the content of a news article or story – "is an intensification of something which shouldn't exist."

During the interview, Chomsky also touched upon the NSA scandal that was covered by The Guardian and The Washington Post after Edward Snowden leaked documents capturing the agency's invasive surveillance program.

Asked if he thinks the coverage of the NSA scandal defeats his model, since it works against "elite groups", Chomsky said no. "The business model is quite willing to tolerate the exposure of governments intervening in personal life...as they don't want a powerful and intrusive state." He explained.

He additionally stressed that today's business do more in the way of violating privacy than the government agencies like the NSA, specifically because of the reliance on advertising.

"With Google, and others of course, there is an immense amount of surveillance to try to obtain personal data about individuals and their habits and interactions and so on, to shape the way information is presented to them. They do more surveillance than the NSA."

Q.29

From Chomsky's quoted interview, which of the following perception can one draw regarding authority?

- 1 ☐ A powerful governmental body is necessary for the media houses to blossom.
 - 2 ☐ Media houses prefer weakened authority figures as they are less likely to question their practices.
 - 3 ☐ Media houses aid governmental snooping and thus form a symbiotic partner of the government in ensuring the former's hegemony.

Directions for questions 25-30: The following passage consists of a set of six questions. Read the passage and answer the questions that follow.

In 1988, renowned linguist and political scholar Noam Chomsky co-authored a book with Edward S. Herman in which he posited that the Western corporate media "manufactured consent" in the interests of dominant and elite groups in society. Chomsky, who is admired for his intellect by some and accused of anti-US leanings by others, argued that propaganda is pervasive in the so-called free media of the West.

A lot has changed in the twenty seven years since Manufacturing Consent was published. Namely, the media ownership models that Chomsky criticized have changed, and that landscape has transformed, largely due to the advent of social media and other online platforms.

Still, Chomsky believes little has changed in his Manufacturing Consent model. In an interview with Byline, Chomsky discussed media landscape, saying that despite the influx of new sources and new platforms, his "basic analysis is still the same."

Though the influence and reach of traditional media conglomerates has waned in the wake of alternative platforms, like Facebook and Twitter, Chomsky maintains that the public's access to information is limited through the same framework.

"I don't look at Twitter because it doesn't tell me anything," He said, "It tells me people's opinions about lots of things, but very briefly and necessarily superficially, and it doesn't have the core news."

"There are journalists there on the scene where major events are taking place and, now there are fewer of them than before, so that's a narrowing of the sources of news," he argued, "What you see is local news, pieces from the wire services, some pieces for The New York Times, and very little else."

Another issue that continues to dominate the media-sphere, according to Chomsky, is the reliance on advertising. In Manufacturing Consent, he wrote that media organizations, for all intents and purposes, are businesses, and as such, are driven by consumer demand. In the case of the news media, the consumers are advertisers. This means that, we, as news media viewers, are the product that is being sold to advertisers. This model, according to Chomsky, is still very alive and well today.

"The product that is being presented to the market is readers (or viewers)," He explained, "So these are basically major corporations providing audiences to other businesses, and that significantly shapes the nature of the institution."

What is happening today, with organizations like BuzzFeed using "native advertising" – advertising that matches the content of a news article or story – "is an intensification of something which shouldn't exist."

During the interview, Chomsky also touched upon the NSA scandal that was covered by The Guardian and

The Washington Post after Edward Snowden leaked documents capturing the agency's invasive surveillance program.

Asked if he thinks the coverage of the NSA scandal defeats his model, since it works against "elite groups", Chomsky said no. "The business model is quite willing to tolerate the exposure of governments intervening in personal life...as they don't want a powerful and intrusive state." He explained.

He additionally stressed that today's business do more in the way of violating privacy than the government agencies like the NSA, specifically because of the reliance on advertising.

"With Google, and others of course, there is an immense amount of surveillance to try to obtain personal data about individuals and their habits and interactions and so on, to shape the way information is presented to them. They do more surveillance than the NSA."

Q.30

Which of the following point can be used to differentiate between surveillance practices of governments and media houses working in tandem with business organisations?

- 1 ☐ Governmental surveillance focuses on the private rather than the public.
- 2 ☐ Governmental surveillance focuses on the private and public rather than on a particular aspect.
- 3 ☐ Governmental surveillance focuses on market factors rather than on social factors.
- 4 ☐ Governmental surveillance focuses on big agencies rather than manufacturing consent through surveillance.

Q.31

The following question consists of a set of five sentences. These sentences need to be arranged in a coherent manner to create a meaningful paragraph. Type in the correct order of the sentences in the space provided below the question.

1. Inside a converted factory is the HQ of Stella McCartney's design business.
 2. Also, across the cacophonous link-road that connects the A40 to Shepherd's Bush is the ever-expanding Westfield shopping centre.
 3. It's only a small corner of west London, but it speaks volumes about the recent history of the city.
 4. And looming over everything is an unspeakably unsettling symbol of the 21st-century capital and its awful inequalities: what remains of Grenfell Tower.
 5. Two minutes' walk away is a similarly refurbished building now owned and used by the photographer Mario Testino.

Q.32

Directions for question 32: The following question consists of a paragraph followed by four summaries. Choose the option that best captures the essence of the paragraph. Type in the option number in the space provided below the question.

This sympathy did not blind Gandhi to the requirements of justice for those communities already resident in Palestine. If the Jews needed a national home, why should the Arabs pay for it? He was distressed that Jews from Europe had sought to enter Palestine 'under the shadow of the British gun.' A 'religious act', he insisted, 'cannot be performed with the aid of the bayonet or the bomb'. If the Jews wanted to settle in Palestine, they should do so 'only by the goodwill of the Arabs'. As things stood, however, the Jews had become 'co-sharers with the British in despoiling a people who have done no wrong to them'.

1. Gandhi criticised the Jewish invasion of Palestine under the British patronage by pointing out the logical fallacy inherent in the act.
 2. Gandhi criticised the Jewish settlement in Palestine by pointing out that two wrongs cannot make a situation right.
 3. Gandhi criticised the Jewish occupation of Palestine by pointing out the unfairness of the act towards the natives of the land.
 4. Gandhi criticised the European occupation of Palestine by pointing out the biased English patronage that favoured foreigners over the natives.

Q.33

Directions for question 33: In this question, five sentences are given. Of these, four sentences can be logically sequenced to make a coherent paragraph. One of the sentences does not belong to the paragraph. Type in the sentence number that doesn't fit into the paragraph.

1. We think that these contentions are correct and must be upheld.
2. It is equally clear that nobody saw who killed Bhagwan.
3. The postmortem examination disclosed that he had sustained as many as thirteen injuries, eleven of which were incised on different parts of the body.
4. The evidence of Naiku shows clearly enough that neither he nor other persons whom he called saw the appellant.
5. The injuries inflicted on the head and face had out through skull bones and the doctor who held the postmortem examination was of the opinion that Bhagwan had died as a result of fractures of the skull bones and hemorrhage and shock.

Q.34

Directions for question 34: In this question, five sentences are given. Of these, four sentences can be logically sequenced to make a coherent paragraph. One of the sentences does not belong to the paragraph. Type in the sentence number that doesn't fit into the paragraph.

1. Jerusalem Syndrome is a well-documented phenomenon where foreign visitors suffer psychotic delusions that they are figures from the Bible or harbingers of the End of Days.
2. Evidence of the Jerusalem Syndrome dates back to Medieval times and observers throughout the centuries have noted the air of madness that seems to hang over pilgrimage sites.
3. Many more incidents go undocumented on the streets of Jerusalem's Old City.
4. Israel's health ministry records around 50 cases a year where a tourist's delusions are so strong that police or mental health professionals are forced to intervene.
5. An Irish schoolteacher who came to a Jerusalem hospital convinced she was about to give birth to the Baby Jesus when in fact she was not even pregnant.

Directions for questions 35 to 38: Answer the questions on the basis of the information given below.

In the following 3×3 grid, each cell has a distinct letter from among a to i. These nine letters are distinct single digit natural numbers.

	C_1	C_2	C_3
R_1	a	d	g
R_2	b	e	h
R_3	c	f	i

Further, it is known that:

(I) The product of the numbers in row R_3 is twice their sum. The same is also true for column C_2 .

(II) Except column C_1 , every column has exactly one even number.

(III) The six digit number 'fdbieh' when multiplied by 3 gives 'dbiehf'.

Q.35

What is the value of a?

1 ☐ 6

2 ☐ 9

3 ☐ 2

4 ☐ 7

Directions for the questions 39 to 42: Answer the questions on the basis of the information given below.

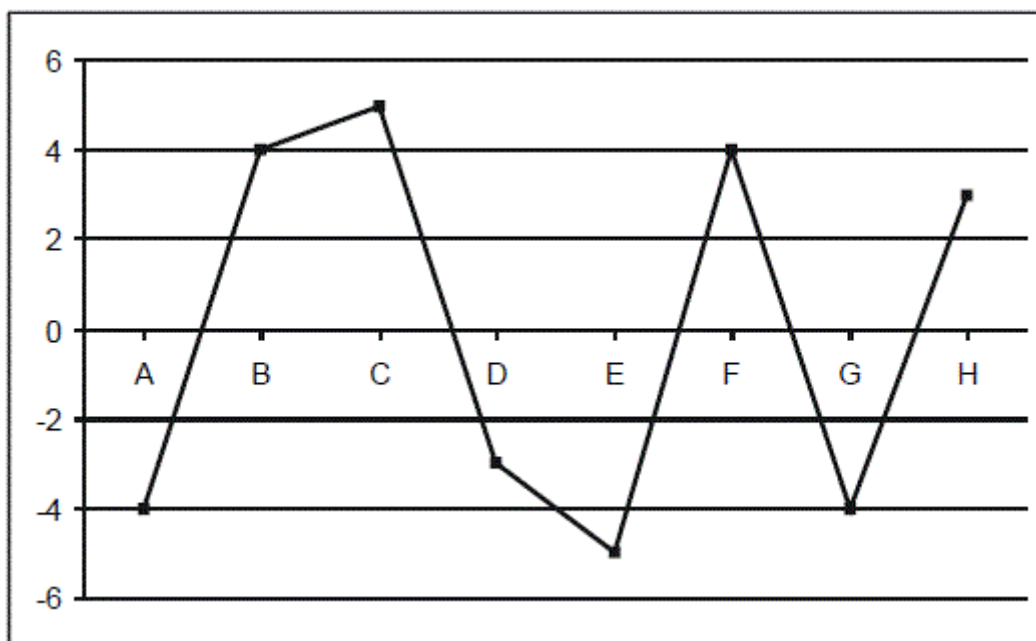

Eight teams – Akabu (A), Bekabu (B), Chikabu (C), Dikabu (D), Ekabu (E), Fekabu(F), Gikabu (G) and Hakabu (H) – participated in a famous tournament namely Anaariyon ka Anaari held in Sikabu island. At the end of the tournament the eight teams were ranked according to their performance, i.e best team was ranked 1 and worst team was ranked 8. Before the tournament started, the king of Sibaku island, Moya, predicted the rank for the eight teams. The following table represents the difference between the ranks predicted by the king of some of the pairs out of the eight teams.

For example, rank of team B predicted by the king was numerically 4 more than that of team E, and the rank of team D predicted by the king was numerically 2 less than that of team A.

	A	B	D	E	G	H
A					1	
B				4		
C		3				
D	-2					
E						
F						
G						
H					4	

The following graph shows comparison viz-a-viz the rank predicted by the king and the actual rank of the eight teams at the end of the tournament.

For example, the rank of team A predicted by the king before the tournament was numerically 4 less than the actual rank of team A at the end of the tournament, and the rank of team B predicted by the king before the tournament was numerically 4 more than the actual rank of team B at the end of the tournament.

Q.39

What was the absolute difference between the actual ranks of Akabu and Hakabu at the end of the tournament?

2 ☐ 1

3 ☐ 4

4 ☐ Cannot be determined

Directions for questions 47 to 50: Answer the questions on the basis of the information given below.

Suruchi invited her 19 friends to her home to celebrate her birthday. By midnight, they were all tired and decided to play a game. Each friend including Suruchi was assigned a unique integer from 1 to 20, such that the friend who was assigned 1 was known as player 1, the friend who was assigned 2 was known as player 2 and so on. In the first game, player 1 lost; in the second game, player 2 lost; in the third game, player 3 lost; and so on. Before the starting of the game, each of the friends had some amount. As per the rules of the game, if any player loses a game, he/she would give an amount of money to each of the other 19 players what he or she already had. For example, if player 1 lost, he would give the other 19 players some money. He would give player 2 the amount of money that player 2 already had in his pocket at that time. Player 3 would be given the amount of money that player 3 had in his pocket, and the rest of the friends would be paid accordingly. Finally, after the 20th game, the amount of money left with each player was the same and is "X".

Q.47

What was the approximate value of money in terms of "X", with player 4 at the beginning.

1 ☐ 2X

2 ☐ 1.25X

3 ☐ 3X

4 ☐ 2.5X

Finally, after the 20th game, the amount of money left with each player was the same and is "X".

Q.50

If after 17th game, the amount of money with player 17 was Rs. 2^{17} , then what was the amount of money with player 8 after 15th game?

1 ☐ 2^8

2 ☐ 2×2^8

3 ☐ 2^{17}

4 ☐ 2^{15}

Directions for questions 51 to 54: Answer the questions on the basis of the information given below.

"Indian football club" is a leading football club in India which prepares young players for international competitions. On 10th January 2016, the club made 4 groups in which all the players were divided, and these groups played matches against each other. On 10th of each of the next three months i.e., February, March and April, the group with lowest number of members (before adding any other member) was disbanded, and all of the players of the disbanded group were distributed among one or more of the other groups. Also, on 1st of each of the next three months i.e., February, March and April, some new members were joined the club and all of them were added to one of the available groups on 10th of the same month. Further, it is known that:

(i) On 10th January, there were 104 members in the club with group III having minimum number of members as 23 and group I having highest number of members as 30.

(ii) On 10th February, all the members of the group with minimum number of members i.e. group III are shifted to group I or group II. All the new members who joined on 1st February joined group IV. The increase in the number of members of group I, II and IV after 10th February was x , y and z , in any order, where x , y , z are three consecutive natural numbers. No two groups had consecutive number of members after 10th February and before 10th March.

(iii) On 1st March, 3 new members joined the club and on 10th March group IV was disbanded. By the end of March, the increase in number of members (over the previous month) in group II was exactly $66\frac{2}{3}\%$

more than the increase in the same group in the previous month. Also, all the new members in March joined group I.

(iv) On 10th April, group I had 1 more member than group II, before the addition of new members.

Q.51

How many members were there in group II on 20th February?

1 ☐ 36

2 ☐ 37

3 ☐ 38

4 ☐ 39

Directions for questions 55 to 58: Answer the questions on the basis of the information given below.

Panda, a magician, in the first magic trick, selected a pack of 13 cards of diamond from deck of 52 cards. He arranged them in some order. As per his magic trick before a group of young children, from this arranged set of cards he discarded the card first from the top and place the second topmost card at the bottom of the pack. Then again discarded the third topmost card placed in initial arrangement and kept the fourth topmost card of the initial arrangement at the bottom of the pack. Continued so on till the last card in his hand was also discarded. The young audience was stunned to see that the cards were discarded in the order of Ace (A), King (K), Queen(Q), Jack(J), 10, 9, 8, 7, 6, 5, 4, 3, 2. But Mahesh, one of the young participant and a logical wizard, was quick to find out that the cards were arranged in a particular order. He could figured out the arrangement.

Face value of a card is defined as the number written on the card. Also, for cards A, K, Q and J, the face values are 1, 13, 12 and 11 respectively.

Q.55

Which of the following was the second card in the initial arrangement?

1 ☐ 3

Directions for questions 59 to 62: Answer the following questions based on the information given below.

A dance troupe participated in a dance competition named 'Mil Ke Nacho', organized by a television channel named Tee ZV. According to the rules of the competition, the troupe had to perform four types of dances D1, D2, D3 and D4, not necessarily in that order. The number of dancers in each type of dances was the same but the arrangement of these dancers on the stage during a particular dance type can be different. The arrangement of dancers on the stage for the different dance types is as follows:

D1 : All dancers should perform in an arrangement the structure of which has multiple rows facing the judges such that number of dancers in n^{th} row (R_n) is n .

D2 : All dancers should dance in an arrangement the structure of which is $n \times n$ grid, having same number of dancers in each row as well as in each column.

D3 : All dancers should dance in an arrangement having one or more rows with exactly 7 dancers in each row.

D4 : All dancers should dance in an arrangement having one or more rows with exactly 9 dancers in each row.

Since the number of dancers in each type of dances of the dance troupe has to be same, the leader of the troupe was not able to decide which dance type to perform in which order, and how many dancers to include in his troupe. Moreover, the judges revised the rule of performing all type of dances and asked him to perform at least 3 dances in any sequence.

Q.59

What is the minimum number of dancers required to perform at least 3 dances in any sequence?

Direction for questions 63 to 66: Answer the following questions based on the information given below.

Ankur has 14 first cousins. All of them gathered for his wedding. They were all sitting together for the reception dinner. Seven of them – A, B, C, D, E, F and G – want to sit in Row-1 facing South, while P, Q, R, S, T, U and V want to sit in Row-2 facing North. However, each row on the table had only 6 chairs, so 1 cousin in each row did not find a place to sit and had to leave. Each sitting cousin was facing another sitting cousin from the other row. Their ages (in years) were among – 8, 9, 10, 11, 12, 14, 15, 16, 17, 18, 19, 22, 23 and 26 – in any order. It is also known that:

R is older than A but younger than C. Only two cousins were sitting between D and C, and D is 4 years older than T. B is youngest and sits opposite to Q, who is 18 years old. The ages of each of the persons sitting at the extreme ends of both the rows are prime numbers. P, whose age is a multiple of 7, was sitting second to the right of S. The sum of the ages of the persons who were sitting at the extreme ends of Row- 2 is 36 with T being one of them. U was sitting at an equidistant position from both R and T and the sum of the ages of U and the one who was sitting to her immediate left is 23. The sum of the ages of F and the one who was sitting opposite to her is 30. E, who is an immediate neighbour of D, is 2 years older than P. The oldest cousin and A, who was not well, were given places to sit. Moreover, cousins with ages being a multiple of 5 managed to sit.

Q.63

What was the ages of the cousins who were not sitting at the dinner table?

1 ☐ 9, 12

2 ☐ 12, 22

3 ☐ 14, 17

4 ☐ 16, 8

Q.70

A dishonest dealer sells goods to a customer at a price which is 6.25% less than the cost price. However he cheats the customer by using a weight of 14g instead of 16g. What is the percentage of his profit/loss?

1 ☐ 7.14% profit

2 ☐ 7.14% loss

3 ☐ 8.12% profit

4 ☐ No profit no loss

Q.72

A, B, C are three pipes. A and B are inlet pipes and can fill a tank in 12 and 6 minutes respectively. C can work either as inlet or outlet pipe. C can fill or empty the tank in 24 minutes. If A and B worked alternately for a minute each, starting with A, and C worked as an inlet pipe for some time and as outlet pipe for the remaining time, then the tank got filled in 10 minutes. If C was open for the entire duration i.e., 10 minutes, find the time (in minutes) for which pipe C worked as an outlet.

Q.73

There are three identical circles of radii 10 units each touching each other as shown in the figure below. What is the circumference (in units) of the biggest circle that can be drawn inside the shaded region?

1 ☐ $\frac{20\pi(2\sqrt{3} + 3)}{3}$

2 ☐ $\frac{20\pi(2\sqrt{3} - 3)}{3}$

3 ☐ $\frac{10\pi(2\sqrt{3} - 3)}{3}$

4 ☐ $\frac{10\pi(2\sqrt{3} + 3)}{3}$

Q.84

Two friends Yogi and Prasad started walking simultaneously from the same vertex of an equilateral triangle and walked in the same direction along the sides of the triangle. It was observed that after some time before meeting first time, one of them was at one of the vertices and the other one was at the foot of the altitude from that vertex. If they keep walking indefinitely, which of the following statements will be true about their meeting points?

1 ☐ They will keep meeting only at one of the three vertices.

2 ☐ They will keep meeting at only two of the three vertices.

3 ☐ They will keep meeting at all three vertices.

4 ☐ Either (1) or (3)
